VOLUME 11

ALBUQUERQUE, NEW MEXICO, SATURDAY AUGUST 13 1904.

NUMBER 32

## MINERAL RESOURCES OF NEW MEXICO

The Mining World speaks as follows of the mineral resources of this territory:

New Mexico is a region of wide and varied possibilities, both mining and otherwise; but it is only the mining that interests us in the present article.

Its mineral wealth varies from gold and precious stones to coal and building material, almost any one of which we are proud to compare with similar deposits of sister states and territories.

Zinc is perhaps attracting more attention and capital at present than any other mineral deposit. The most productive district being the Magdalena mountain, with mines in and around Kelly; but Haverock also has good deposits controlled and worked by the Empire Zinc company.

The Magdalena zinc ores are all of the oxidized type, usually at the Smithsonian variety and are found below the deposits of lead. One very interesting formation of the ore is a siliceous replacement in the "silver pipe" line. This silica is as times replaced as much as 40 per cent. by the carbonate of zinc. The district is shipping from 800 to 1,000 tons of ore per week at a good profit.

Lead as an associated mineral is separated and shipped in smaller amounts, being usually of the oxidized variety, such as the sulphate and carbonate.

Copper is the leading mineral of the territory, and when transportation facilities are right it will take its place in the lead amongst the best copper producers of the world.

New Mexico copper occurs in three distinct and typical forms: Native copper, malachite, and chalcocite. The native copper district of Santa Rita at present produces \$100,000 in copper per month. The Hurro mountain district in Grant county, treats 100 tons of ore per day. The Mogollon district extracts mostly in borate ore and is producing about \$10,000 a month in concentrates and high grade ore, running from \$100 to \$150 per ton, and this with a wagon haulage of 97 miles over bad roads.

The Pecos and Huerfano districts, controlled by the New Mexico Fuel and Iron company, is shipping hematite iron ore of excellent quality to the amount of fifty cars per day.

Salt, sulphur and fluxing materials are abundant and much money has been expended on borate and borax lands in the last two years. There is enough of these minerals in New Mexico to supply the alkali industries of the world for generations to come.

Coal in varieties from anthracite to lignite is common in good beds for mining. At present, however, the industry is limited to little above local consumption, although some of this coal produces coke of the best quality, while others are good gas coals.

Marble of several varieties is found in good mineable condition and the gypsum beds are practically inexhaustible.

Turquoise occurs in at least two localities and the mines of New Mexico supply 65 per cent. of the turquoise used at present. The quality is excellent and the size large.

Opals occur abundantly with the exception of the fiery variety, and there is exceptional opportunity for building up a valuable industry.

Agates and chalcedonies of superior quality are numerous in most localities. These take on an excellent polish and are noted for their delicate shades and hues of color.

## SON OF F. A. HUBBELL.

### LOST THREE DAYS IN THE BIERA PALOMA AND BLACK RANGE MOUNTAINS.

The startling experience of James Hubbell, aged 15, who left here a short time ago, accompanied by his father, F. A. Hubbell, the prominent politician and sheep raiser, for a short sojourn in Bitterroot country, where Mr. Hubbell has extensive interests.

Upon their arrival at his home ranch on the west end of the San Angelito plains, they were informed by his most trusted corporals, Roman and Porfido, where the sheep were grazing, so without delay they hurried along in the direction of the several herds, visiting all the camps, making the necessary changes, etc., which, of course, occupied much time. But to James, who is a lover of the beautiful, the days just flew by, and the supreme thoughts of the chance from Albuquerque, that fertile plain, in the wilds made him exceedingly happy; when in the roughs of the great mountains he would search all day long for lion, bear, wolves and all sorts of wild things, which to him was delightful sport.

As usual James satisfied his horse with great anticipation as to what he would find before the day ended. It was August 2nd in the afternoon, about 4 o'clock, when he left his father's camp, known as Coyote Tank, where several men and teams were engaged in the construction of a large reservoir.

His instructions to the cook on his departure, touched on the art of bread

making, at which the cook is not over efficient, in this the writer can testify. But on the promise that the cook would have some bread for supper that would particularly suit his taste, he was off like a jug handle.

At the close of day his father anxiously awaited his return. But on the approach of night, and yet no boy, he became alarmed and sent all available men to search for him in the darkness. Fires were started on the mountain tops many miles around, dispatches were sent to all neighboring ranches and camps for assistance, to which everyone readily responded, and soon the canyons rang and echoed with the sound of horsemen hurrying over the rocks to the scene from every direction. That night, several miles east, three shots were heard by the same camped in that vicinity. In the morning, some distance south of Coyote, James' horse was found tied in a thicket almost hidden from view and his 30-30 rifle on the saddle was missing. At first he feared that he had met with an accident. Some tracks were found but could be followed no distance over the rocks.

There was much commotion after which the day ended with the same results as the day preceding, and by this time Mr. Hubbell's condition was most distressing, and the situation indescribable.

The morning of the third day we left camp determined to find the boy, with forty-five mounted men and fifteen mules. On the field we formed a military line of three divisions, with as many captains to direct their course, placing the men at a distance of one-quarter to one-half mile apart, making a clean sweep through the country surrounding Coyote Tank, crossing the canyons as we came to them, all the while urging the men onward.

The excitement was great at 3:30 p. m. when the end of the division moved eastward dropped over into the canyon, owned by Mr. Mike, and learned that James had reached there the day before at 11 a. m., whereupon he covered with the lady, who was alone, at a hearty meal, read the newspaper, after which he arose, stretched himself, and at 12:30 o'clock was off again in the direction of the Adobe ranch, still farther east. Arrangements were quickly made with Mr. Glaze, for horses to go on to that place, and three men hurried off for there.

Immediately a messenger was sent dashing away toward Coyote tank, with a note to Mr. Hubbell, announcing the good news, and others were sent west to reach Mr. Hubbell's line.

As the horses came dashing down the mountain to the corral, we were surprised by the unexpected appearance of James himself, who strolled leisurely along coming up the canyon, at the sight of whom the boys shouted. Guns were discharged as fast as their machinery would work, and everybody greeted him. He had had nothing to eat since he ate there the day before, two meals in fifty-two hours, no coat, nothing but a gun for protection, and the sky for cover.

W. A. FULLERTON.

### Successful Balloon Test.

Paris, August 11.—St. Lebaudy's steerable balloon made a quarter of an hour's flight, covering a considerable distance at a height of eighty yards, and returning to its shed without the slightest hitch. M. Lebaudy and the engineer who steered said that the balloon covered about twelve and a half miles during its fifteen minutes' flight. It is calculated that the screws made 1,100 revolutions a minute, and it is pointed out that the motor is so constructed as to minimize the vibrations produced by the screws.

### United in Death Pact.

Des Moines, Ia., August 11.—The Des Moines murder mystery was cleared by the discovery of the body of Ed Daugherty in a field where it had lain for more than two days. Officers are satisfied that Daugherty and Miss Ford decided to die together and that the woman succeeded, but the man, weak, lying, covered her hastily with a quilt and fled. Later in the morning, he is believed to have completed his part of the tragic agreement.

### ALFALFA CROP

Owing to several showers during the past few days, and the fact that the irrigating ditches have been full of water, the alfalfa fields are now looking quite green. It is expected that within five or six weeks there will be a fine cutting of alfalfa. The home market is well supplied with fruit and vegetables, including apples, peaches, watermelons, cantaloupes, cabbages, green corn, tomatoes, chile, cucumbers, lima beans, sweet potatoes and onions. Considerable quantities are also being shipped out.

### Savannah's New City Hall.

Savannah, Ga., August 11.—This was a gala day in Savannah, the occasion being the laying of the corner stone of the new city hall. Business was largely suspended and at the request of Mayor Myers the day was observed as a general holiday. The ceremony was conducted under Masonic auspices and was accompanied by addresses from the mayor and other city officials. A notable feature was the participation of the mayors

of other officials of nearly every prominent city of the state, who are here in attendance on the convention of the League of Georgia Municipalities.

Senator Fairbanks the Speaker, Marysville, Ohio, August 11.—Senator Fairbanks, republican nominee for vice president, was the speaker today at the Old Home week celebration here. The address was made at an old fashioned basket picnic which was attended by men, women and children from far and near. Senator Fairbanks was accompanied by Mrs. Fairbanks, who is a native of this country.

### From Steam to Electricity.

Buffalo, N. Y., August 11.—The Vanderbilt is said to be planning to equip the entire West Shore railroad with electricity and to adopt this motive power for the Niagara Falls & Lewiston branch, the Rome, Watertown & Ogdensburg and the Oswego branch of the New York Central. The plan as outlined call for the construction of a power house at Niagara Falls to cost \$24,000,000.

### BACK FROM THE EAST

#### J. S. BEAVEN AND FAMILY RETURNED HOME LAST NIGHT FROM A PLEASANT TRIP.

John S. Beaven, the South First street coal dealer, accompanied by his family, returned to the city last night after a most enjoyable vacation of three months spent back in the states.

They visited Louisville and spent a couple of months at Mr. Beaven's old home in Lebanon, Ky. On their return they stopped in Chicago a few days, and then went to St. Louis to see the big fair.

"We had a delightful trip," said Mr. Beaven this morning, "and enjoyed every minute of the time. We spent eight days at the fair, and I want to tell you that exposition is grand beyond description. Its magnitude cannot be realized without being seen. The reports about exorbitant prices in St. Louis have been greatly exaggerated. In fact, we were surprised to find the prices so very reasonable, both on the fair grounds and in the city."

After leaving St. Louis Mr. Beaven and family visited friends at Topeka and stopped a week or more at Pueblo. He says they came very near being passengers on the ill-fated train that went down in Dry creek, eight miles from Pueblo. Their anxiety to get home changed their decision of going to Colorado Springs at that time, and Mr. Beaven considers they had a very fortunate escape.

### WHOLESALE GROCERS MEET

#### THEY ORGANIZE A CLUB FOR MUTUAL BENEFIT.

The wholesale grocers of New Mexico, representing Silver City, Gallup, Santa Fe, Albuquerque, Batoon and Las Vegas, met by pre-arrangement, yesterday, in the latter city and organized what will be known as the Wholesale Grocers' club of New Mexico, a social as well as business organization, the main purpose being to take up from time to time, the question of freight rates with the various transportation companies serving the territory, and where discrimination exists to endeavor to handle the matter jointly in a business like manner.

Many of the high prices that now rule on various staple commodities, is largely due to excessive local freight, and if by concerted action of the New Mexico grocers, this, even in part, could be overcome and the cost to the consumer lessened, much good will have been accomplished.

The club will be incorporated under the laws of the territory, with H. W. Kelly of Las Vegas, president; C. N. Cotton, Gallup, vice president; M. W. Browne, Las Vegas, treasurer; D. E. H. Sellers, Albuquerque, secretary, with main office and headquarters located at Albuquerque.

### Bean Day in Iowa Town.

Elkhart, Iowa, August 12.—Tomorrow is to be the biggest day of the year for the people of Geneva, a little town of about one thousand population, north of this place. It will be Bean Day. Many Iowa towns each year have a street fair, carnival or county fair, but Geneva is the only town in the United States that has a Bean Day.

At Geneva on Bean Day, the popular vegetable is served in every imaginable manner, and the populace from far and wide assemble and devour the beans. On account of the lack of a large enough dining hall to accommodate the crowd a large canvas has been provided for tomorrow's feast, which will be followed by speeches and all kinds of amusement.

### Arizona Democratic Convention.

A territorial democratic convention has been called to meet at Phoenix, Ariz., on Thursday, September 15, 1904, at 12 o'clock, noon, to nominate from the territory of Arizona and to select a territorial central committee and a chairman and secretary of said committee, and for the transaction of such other business as may properly come before the convention.

## THE LAS VEGAS CELEBRATION

The excursion train arrived safely in Las Vegas at 11:10 o'clock, and the arriving Albuquerqueans were greeted with enthusiasm by crowds of Las Vegasans, who cheered lustily. The welcome was gracious. It was plainly evident that Las Vegas was glad that Albuquerque had come to the encampment and the visitors seemed glad because they had come.

It was decidedly Albuquerque day. Albuquerque was everywhere. The Duke City people were there. They won the base ball game. They made music on brass instruments and tin horns. The grand stand at Gallinas park rang with cheers from Albuquerque throats. The horses on the track were Albuquerque horses. Nimble Jim, Action and McGinty are all familiar to the visitors.

A train from Bates brought about 100 people to help celebrate Albuquerque day at Las Vegas. But these 100 souls were so small a portion of the crowd that their presence was hardly noticed. Bates contributed probably sixty people, and these came in on the Albuquerque excursion train. The Albuquerque crowd numbered 433 souls who came on the excursion and regular trains, but doesn't include the hundred soldiers at the encampment.

The fair club about occurred during the forenoon at Gallinas park, but did not attract a very large number of spectators.

At 1:15 the crowds began going to the park for the afternoon sports. Gallinas park is about four miles north-west of the city.

The electric car track, on which steam cars are at present operated, leaves new Las Vegas, passes the old town, and winds up the pretty valley of the Rio Gallinas. The country is covered with green, which is evidence of recent rains. Prosperous fields of growing grain and truck gardens smile back at the passenger as he gazes from the window of the Santa Fe coach, as it is pulled up the rising grade.

Three and a half miles up, a mile from the track, and upon a high mesa, is Camp Otero, with the stars and stripes floating gracefully in over stirring breeze. The location is ideal.

An abundance of wood and water is handy and convenient to the railroad, and yet the ever presence of quiet, strikes forcibly on the notion of the close observer.

The camp is laid out in a rectangle. Troop A, the cavalry, is located on the west side of the square, while the infantry tents from the north, east and west. The officers' quarters are still west of the cavalry quarters. The guardsmen are doing some hard work and getting some good practice in the manual of arms. Tomorrow they display and engage in a sham battle for the spectators.

### What the Browns Did to the Blues.

It was pitiful, painful, even heart rending, the way the Browns pounded the pig skin, sending the little bounding sphere cutting across the grassy field of Gallinas park for the boys in blue to chase. The first inning they scored six runs, and the fireworks continued until the eighth inning, when the count was lost. At the finish some one said it was 22 to 1 in favor of Albuquerque, but if the report had been that it was a greater number, those who left before the game was half over would not have been surprised. It was wicked, the way the Browns beat the Blues at Gallinas park.

Chas. Rhodes took the rubber for the Blues and they didn't do a thing to him."

He gave it up at the end of the inning, and Panning took his turn. After three innings he gave it up and Rhodes was back in. He did as well as those who went before him. The Browns seemed to delight in hitting the ball into the outfield, and running bases. "Dewey" Wilson got two three-baggers, one on Panning, and one on Rhodes. French is the only Brown that didn't make from one to three hits. Meyers got one for three bases, and Starr drew one for two. Starr struck out eleven men. The one score the Las Vegas boys made was made on two errors. At 4 o'clock nearly everybody had returned to the city. The time for the departure of the excursion was postponed from 8 until 11 o'clock. A dance was given in the opera house and was largely attended.

Mr. McNary, of the Optic, came to the hotel at 8 o'clock and extended the freedom of the Commercial club to the Albuquerqueans. The club was made merry with dancing, singing and music.

### Yacht Club Cruise.

New York, August 11.—This was an unusually busy day for the marine reporters stationed about Glen Cove at the entrance to the sound. Their steam launch was kept hopping all day, fitting after the white-winged yachts that were bound to the westward preparatory to rendezvousing for the annual cruise of the New York club. The indications are that this year's outing will eclipse anything in the past. The cruise proper will not begin until tomorrow, when the yachts will get underway and proceed to Morris Cove, going on to the old whaling port of New London the day following. As in

former years the cruise will extend to Newport where the yachts will engage in the annual races for the Astor cup next week.

### A. O. H. of Maryland.

Frederick, Md., August 11.—The Maryland division of the Ancient Order of Hibernians began its annual convention here today with a good attendance of delegates and visitors. Prior to the opening of the business the delegates attended mass in a body. The sessions, which will last three days, will be interspersed with various features of entertainment arranged by the local members of the order.

### Navajo Indian Band.

It has been suggested that a Navajo Indian band will be in attendance and will enter the band contest for the big prize offered by the fair association this year. Navajo Indian music will certainly be somewhat of a novelty, and while it may depend in a great measure as to who are the judges of the contest as to whether they receive prizes or not, it certainly will be an attraction worth coming to hear.

### ALAMOGORDO'S WOMAN ENGINEER

#### SHE RUNS A NATURAL ICE PLANT WITH PROFIT IN THE COTTONWOOD CITY.

Alamogordo has a woman engineer and the success she has made in running an ice plant in that city should be an incentive to build similar plants elsewhere. Five years ago Mr. and Mrs. George Carl came to Alamogordo and settled on land which was as barren and as unproductive as any of the arid land between Santa Fe and Lamp, says the Alamogordo Journal.

They set out shade trees and an orchard, consisting of pears, peaches, plums, apricots, apples of various varieties, and quinces, and now they have fine, large shade trees and an orchard that bears more fruit than they use or care for. At the present time they have fine ripe peaches, and plums and white grapes. They have several varieties of grapes.

The comfortable dwelling house, the tempting shade trees, pretty lawn, and inviting orchard form an ensemble that appeals to the admiration of the visitors.

### Good Fortune of a Southern University.

New York, August 12.—An appraisal of the estate of Alexander Hutchinson of this city, who died in New Orleans December 7, 1902, shows that he left property valued at \$1,020,000, exclusive of real estate, the value of which is not yet ascertained. Under the provisions of his will Tulane university will receive, on this basis, \$332,475, to be used for upbuilding its medical department. Tulane university is in New Orleans.

## KNIGHTS OF PYTHIAS AT LOUISVILLE

Louisville, Ky., August 12.—The gathering of Knights of Pythias in this city next week will be the greatest event in the history of Louisville secret societies. The occasion for this gathering is the meeting of the Supreme Lodge, Knights of Pythias, which will last two weeks, in connection with the supreme lodge meeting will be the encampment of the uniform rank, the prize drills and other features which combine to make the gathering one of the most brilliant and attractive of the kind held in this country. The Pythian Sisterhood will also be in session during the week and the dramatic order, Knights of Honor, will also be here.

The hotel proprietors and local railroad officials say that from all indications the visitors will number fully 75,000. The city is being decorated as never before. The grand parade of the encampment will take place on Tuesday, in which all the members of the supreme lodge will take part, and promises to be the finest display this city has ever seen. Numerous receptions and other events have been planned for the entertainment of the knights and their ladies during the encampment.

### Texas Stenographers.

Dallas, Texas, August 12.—The Texas Stenographers' association here gave a two days' convention in Dallas today with a good attendance of members from various parts of the state. The officers in charge of the convention are President J. H. Scope of Houston, and Secretary Hugo Harrison, Hawkins of Fort Worth. The most important matter up for consideration is the law relating to the pay of court stenographers, which the stenographers believe should be amended.

### Twins 82 Years Old.

Elgin, Ill., August 12.—An interesting family reunion was held today at the home of N. R. Sanford in this city. The occasion was in celebration of the sixty-second birthday of Mr. Sanford and his twin brother, David Sanford, whose birth he in Paganay, Iowa, a brother of the twins, came to Elgin to attend the reunion, notwithstanding the fact that he is 82 years old.

The history of the family is remarkable in several respects. It originally consisted of thirteen members, seven of whom survive. The combined ages of the brothers and sisters still living is 585 years, this bringing the average to 52 years.

Colored Heavyweights to Mix. Los Angeles, Cal., August 12.—"Denver Kid" Martin and Sam McVey, the colored heavyweights, have finished their work of preparation and appear to be in fine fettle for their 20-round bout, which is slated for the arena of the Outing Athletic club to night. McVey, who is a local man, is a favorite in what betting is being done on the result. On the other hand, Martin and his manager, Billy Madden, express confidence in the Denver fighter's ability to defeat McVey. To night's meeting will be the second time the two have met in the ring. On the occasion of their first encounter McVey succeeded in putting Martin out in one round.

### To Race for Lipton Cup.

Chicago, August 12.—The inner harbor today is dotted with white-winged craft flying the ensigns of the Detroit Yacht club, Milwaukee Yacht club, Chicago Yacht club and other yacht clubs of the great lakes. The yachts have gathered here to take part in the Lipton Cup races, the first of which will be sailed tomorrow over the triangle course of the Columbia Yacht club. With favorable wind and weather conditions the experts say the contest should prove the most interesting ever sailed in Chicago waters. The local yacht clubs have entered several boats which they think fast enough to retain the cup here. On the other hand, the Milwaukee Yacht club has set the flyer Mendota, owned by Commodore Vilas, who is confident that she is the fastest yacht on the lakes. Detroit, also, and several other clubs have entries and no doubt sailors that the contests will be closely contested from start to finish.

### PORTO RICANS VISIT WASHINGTON

Washington, August 12.—The several hundred Porto Rican teachers who have been traveling in this country and attending the summer schools at Harvard, Cornell and elsewhere arrived in Washington today to pay their respects to the president before leaving for home. The visitors were received in the capital by Dr. W. T. Harris, United States commissioner of education, and a committee representing the educational institutions of the District of Columbia. The "greenhorn" was spent in sightseeing. The teachers were received by the president this afternoon and cordial greetings exchanged.

### Crazed Father Kills Family.

Galveston, August 12.—A terrible tragedy occurred at Rockwall, Texas, in which a man killed his wife, two children and himself. The quadruple crime occurred but a few minutes after the man had been acquitted in the probate court on a charge of insanity, which had been preferred to his wife, Mrs. Q. T. McLain.

### COMPLETED THE CONTRACT.

#### El Paso Parties Finish Delivery of Stock in South Africa.

Col. C. F. Hunt, Mark Miller and H. M. Maple have recently completed the delivery on a big live stock contract which they had with South African parties. In all they shipped 4,100 head of sheep, 400 mules, 300 burros and 100 horses.

### Terrestrial Blind Asylum.

The board of directors of the New Mexico blind asylum held a meeting at Alamogordo and finished their work in the matter of consideration of the bids for the erection of the asylum building. The contract was awarded to Jack Quinliven, a local contractor and builder, the amount of his bid being \$16,821. The territory owns a plot of ground northwest of the town, where the building will be erected.

### New Bank for El Paso.

Telegram from Washington announces that the comptroller of the currency has approved an application for the organization of the City National bank of El Paso: capital stock, \$1,000,000. Officers, R. M. May, P. W. Parker, T. McKinley, Edward A. Mann, Ed. Mangum.

### Pointed Paragraphs.

From the Chicago News.  
A woman may be convinced in after years that she drew a blank in the matrimonial lottery, but she clings to the belief that her husband drew a prize.

No man is a novelty unless he is a prominent woman's husband.  
The poor divided bride thinks she is marrying the best man at the wedding.

May a girl who is a daisy when she graduates is transformed into a wall flower later on.

When a woman sleeps in a hotel she always does a slumber role that will show up well on a fire escape.

## FIRE FIGHTING AT THE WORLD'S FAIR

Hales fire fighters' education at the World's fair consists perhaps of two acres, and consists of a fully equipped fire station—barns, steam fire engines, hook and ladder wagons, chemical engines and a full force of trained fire fighters under the direction of George C. Hale, former chief of the Kansas City fire department. The exhibit is an actual part of the fire protection service of the World's fair, and may be called at any time to go out on the grounds.

The roof of the enclosure is nearly 100 feet high, and at one side of an arena are seats for over a thousand people. The opening in front of the enclosure is 300 feet long, and on the opposite side is a building six stories high. After a lecture explaining the exhibit, a gong is sounded, and a procession, passed before the audience, consisting of three engines with steam up, chemical engines, hook and ladder, firemen on foot, etc. This over, several demonstrations of skill are given. William Willis, of Illinois, runs 100 feet and makes a coupling with three full turns in four and one-half seconds.

Another gong is sounded, with the horses in their stalls, and the firemen in bed, 250 feet away, in 25 seconds they are harnessed to a combination hook and ladder wagon, run 250 feet, lay 150 feet of hose, attached to a real hydrant, and are pouring water on a supposedly burning building. Again the gong is sounded and in 21 seconds the hook and ladder company is on hand and the men with their scaling ladders are on top of a six-story building.

But the greatest demonstration of all is yet to come. The arena is dark, and a 24 alarm siren wails. Then inside the six-story building across the way a fire bursts forth, and not until it has burned much headway is the gong sounded. The men are in bed as before and the horses in their stalls. In a few seconds the horses come flying down the street with the engine and at the same moment women and children begin appearing at the open windows of the burning building for their night clothes screaming for help. The din is terrible but the firemen work hard. The scaling ladders are again brought into regular action and soon the first man climbs to the top window, anchors a life line and drops it to the ground, then he turns, selects a sewing woman from one arm, grabs the line with the other, and drops to the ground in safety. Others are doing the same at different windows.

In one case two children are in one room, and the flames are so fierce that there is not time to make two trips, so the brave man turns himself upside down, winds the line about his feet, grasps a child in each hand and thus, hanging himself head down and the children feet down, he slides down the rope, having only his legs to break the descent. This is a nerve and daring performance, and receives loud cheers just as the last inmate is rescued and is safely outside the building. The walls fall with a crash and a shudder of relief passes, that all were rescued. The hose had meantime been working and keeps back the fire while the rescuers work. It is just seven minutes from the time the gong sounds, until the people are all rescued, and the building falls to pieces. It is all very realistic. The building is made of inflammable and smeared with combustible.

### PRESBYTERIAN PASTOR

#### FAREWELL OF ALBUQUERQUE'S NEW MINISTER TO OLD PARISH IN IOWA.

The paper published at Centerville, Iowa, has the following complimentary notice regarding Rev. H. A. Cooper, who is to arrive in Albuquerque in a few weeks to assume the pastorate of the First Presbyterian church. It says:

"Encouraging the church to press on in its mission of righteousness, Rev. H. A. Cooper will be a blessing to the congregation of the First Presbyterian church at the Sunday service. He will not leave the city for a few days yet, and will be present at the Wednesday evening prayer meeting, but Sunday morning was the last service of that kind he will conduct before moving to Albuquerque, New Mexico, where he has been called to the pastorate of the First Presbyterian church. No pastor who has ever come to Centerville has made a warmer place in the affections of the people. This he has done by his devotion to the cause of Christ, his largeness of heart, his never failing tact and good fellowship."

Three years ago, past Presbyterian Rev. Mr. Cooper came to the Centerville church. He came from Paola, Kas., where he had been eight years. Since coming here the church has increased 150 in membership, been put in first class financial condition, and become strengthened in many ways. In his sermon Sunday he remarked that this pastorate has been the most fruitful of any he had had thus far."

A lady liver makes a lady man. Hardish blood hatters is the natural, never failing remedy for a lady liver.
